Protective clothing for women

Comfortable and protective clothing for women

Protective clothing for women : with a focus on fit, safety, function and comfort.

Although the workforce is predominantly male in fields like construction, energy, (petro)chemical and the steel industry, you will find more and more women at work in these industries. But unfortunately, for a long time women's workwear was limited to men's workwear and that is just not quite the same. As women have a different body shape, men's clothing is just not that comfortable for women. Sioen therefore decided to focus on the needs of women in the industry: protective workwear that is fitted to their shape.

The perfect examples of such protective clothing are the Kasie and the Lesha. These jacket and trousers protect women in a comfortable way against the risks of an electrical flashover. The primary concern for people that have been exposed to an electrical arc flash is very serious skin burns due to the high amount of heat that is set free during such an arc flash. But in order for the PPE to be effective the clothing needs to fit because inappropriate PPE can impact on a person's work and their safety. The Kasie and the Lesha are the perfect protective clothing for those power women who stand their ground in a hazardous working environment. If the protective clothing doesn't need to comply to the EN ISO 20471 standard then the Oroya and Casma are a perfect match.

Where form follows function: Vaski and Heika

If you need to go out on rainy days you do not want to get wet. So a rain proof jacket should do the trick, right? Yes, provided that the jacket fits. If it's too big you get gaps and you get wet. Taking a product that is initially designed for men and then reducing its size does not necessarily make it suitable for women. That is why the Vaski, a multi-norm rain jacket, and the Talia, a hi-vis rain jacket, are designed by women for women. During the design not only the female shape has been taken into account but a lot of attention was also paid to delicate areas like pockets and seams so no water penetration is possible. Thanks to our Interchangeable Lining System (I.L.S.) you can easily zip in the softshell Heika (in the Vaski) or Jerica (in the Talia) for those colder days.

Sioen is working hard on designing safe, stylish and practical protective clothing for women.

Talia - 546AA2EU1
Ladies hi-vis rainjacket

Jerica - 547AA2TU2
Ladies hi-vis softshell
